

Fairbnb - Entity Relationship Diagram

Fair stays. Fair people. Fairer communities.

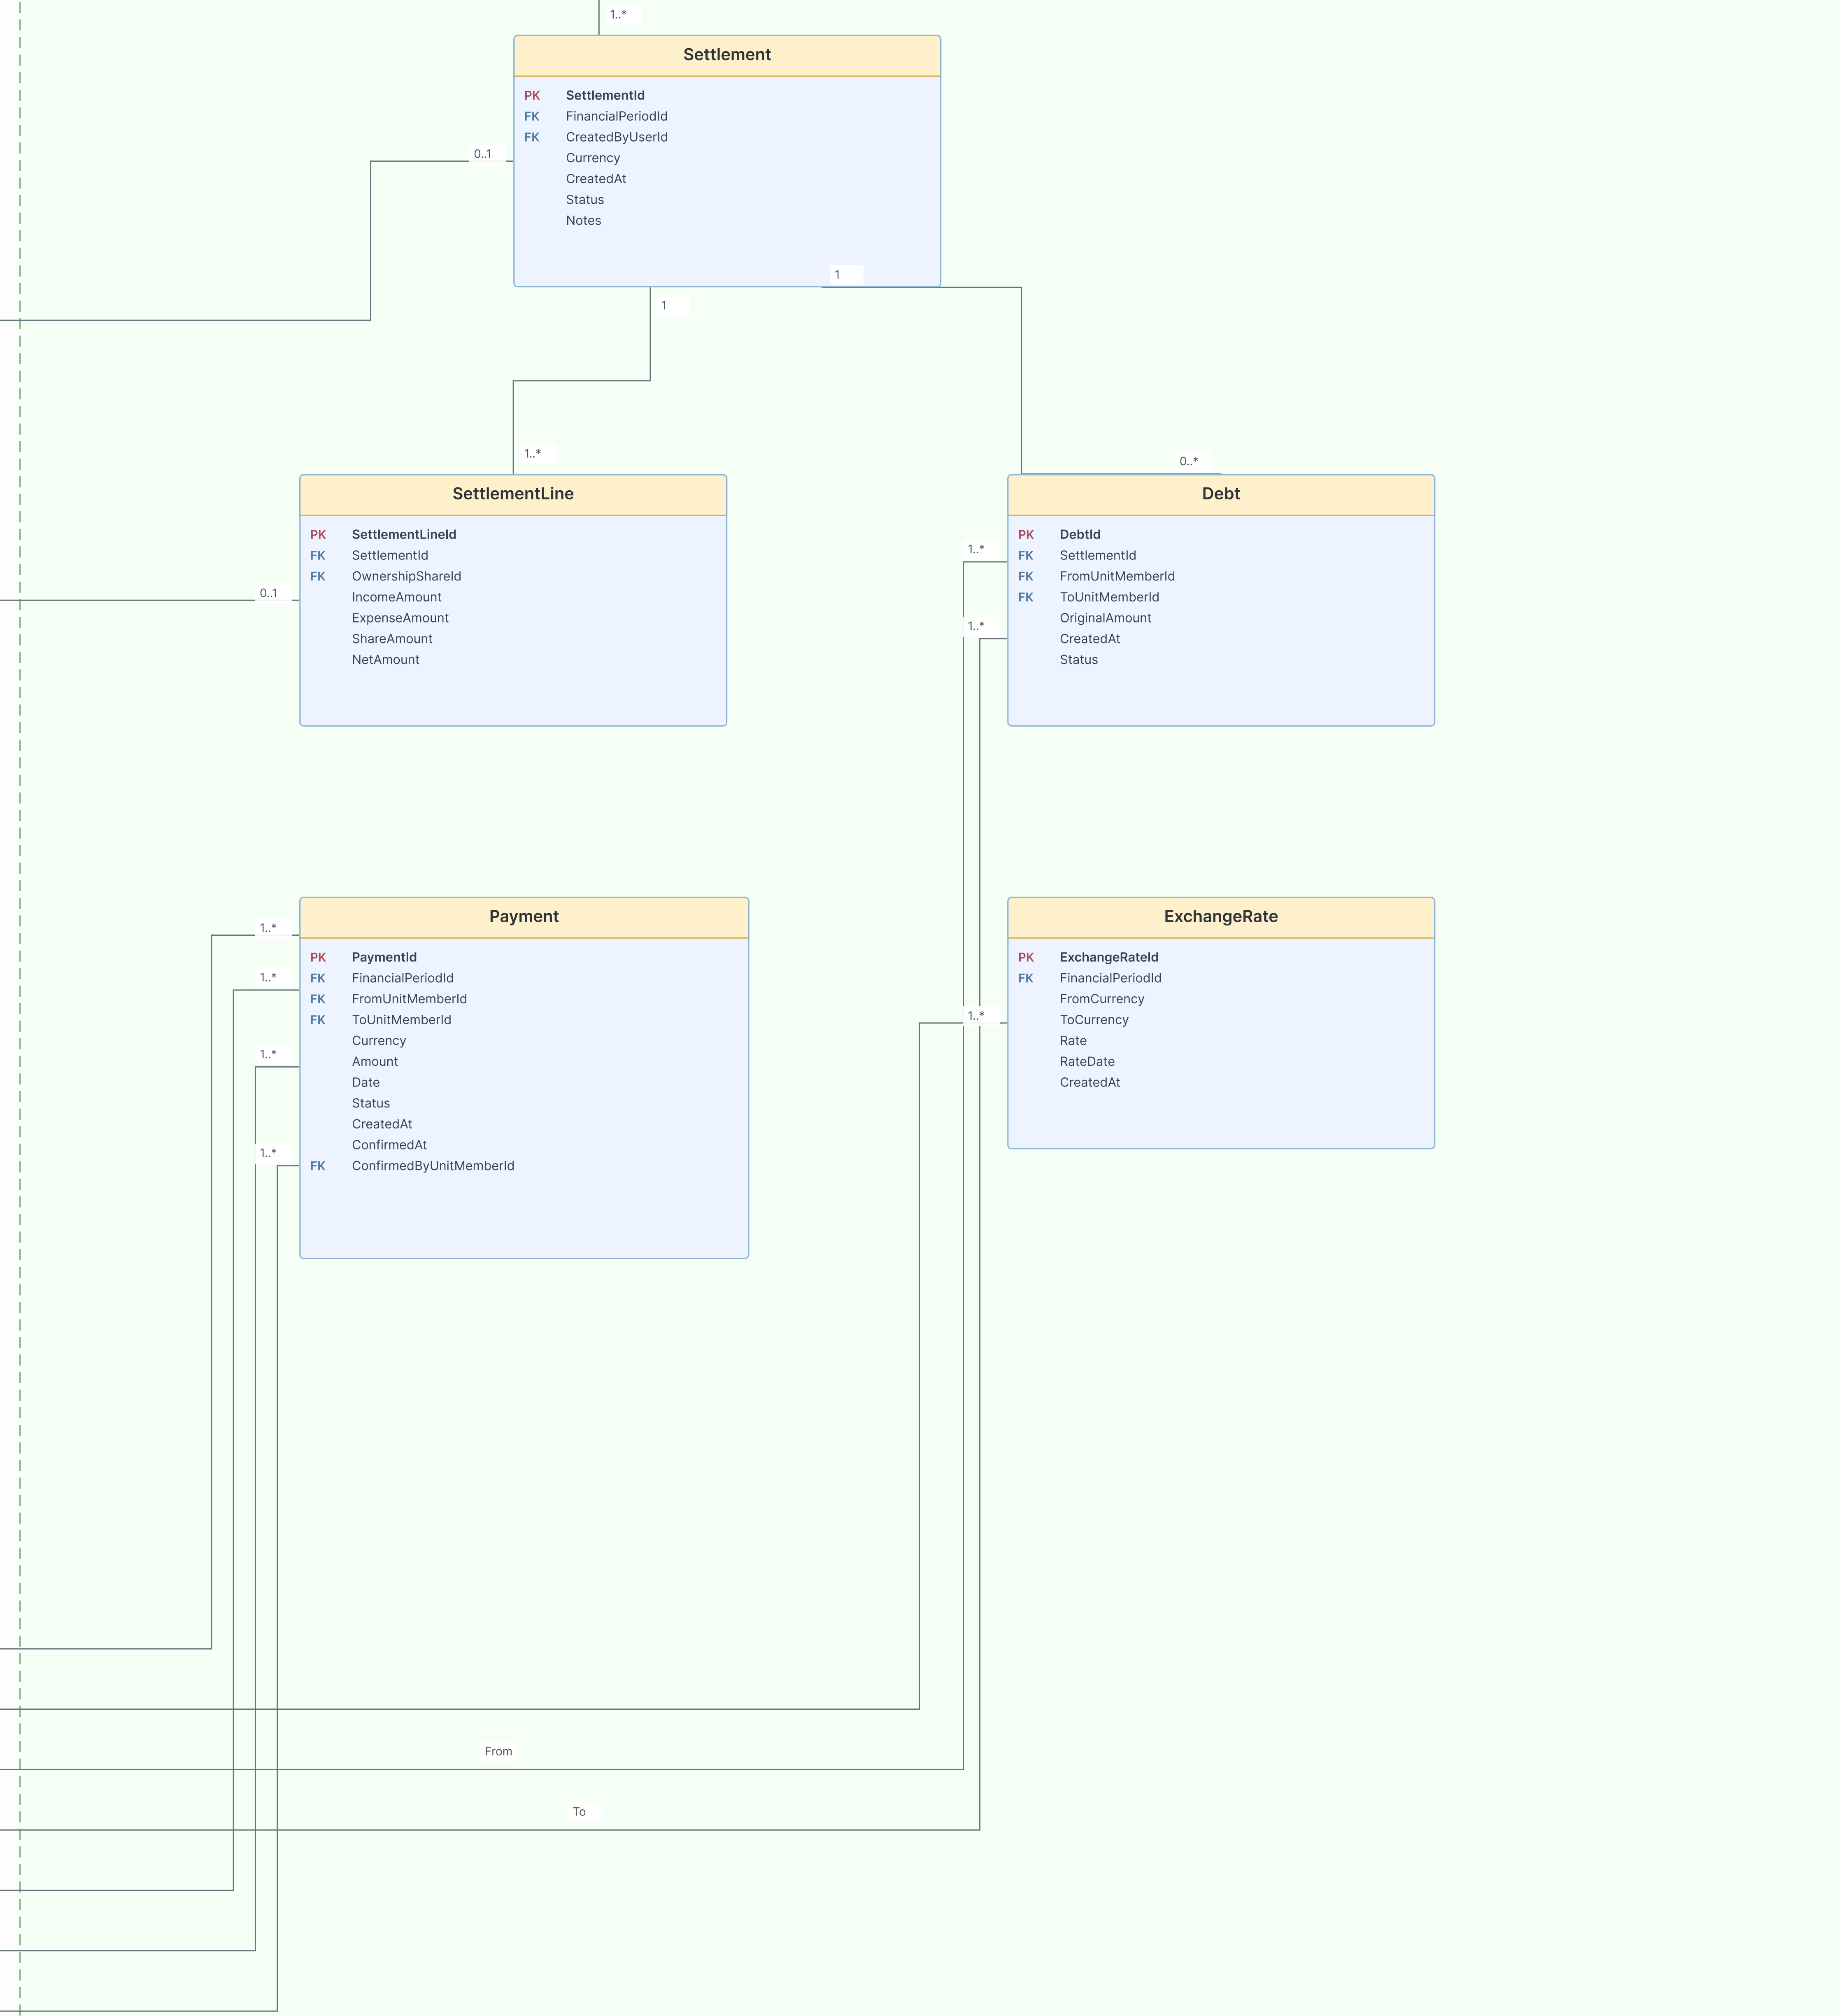

People / Unit setup

Periods / Operations

Settlement / Debts / Payments

Key business rules

1. Invitations do not expire; they remain Pending until accepted, declined, or removed by an Admin.
2. Unit creator is automatically added as an active UnitMember with Role = Admin. Every Unit must always have at least one active Admin.
3. Ownership shares are stored per FinancialPeriod and cannot change mid-period.
4. Share total may be below 100% during setup, but must be 100% before settlement.
5. Every Unit must have at least one Room.
6. Room aliases are remembered for future CSV matching; unmatched income is allowed.
7. ImportedIncome is stored exactly as supplied by the Airbnb CSV, is always USD, and cannot be manually edited or corrected in Fairbnb; Airbnb-provided corrections arrive through later CSV data.
8. Income period = payout date. Expense period = expense date.
9. Expense RoomId nul means the expense belongs to the whole Unit.
10. Expense categories are shared within a Unit: all active UnitMembers can see and use Unit categories; predefined system categories may be shared across Units.
11. Expense and manual-income templates are personal to the UnitMember who created them; other members cannot see or manage those templates.
12. Debts are aggregated per member pair. Confirmed pairwise payments reduce the outstanding balance regardless of which expenses created it.
13. Closed-period expense and manual-income corrections are posted in the current open period, reference the original record, and settle only the calculated difference. Historical adjusted statistics use the correction reference without changing the original closed record.
14. Settlements are grouped by currency, not by income versus expense. Income and expenses in the same currency contribute to the same settlement; payments are recorded in that settlement currency.
15. Exchange rates are stored per FinancialPeriod and currency pair and are used only for combined reports/statistics; settlement balances are never converted.
